📦 Flutter Project Task – E-Commerce App Using Firebase

🔗 **Figma Design**:
https://www.figma.com/design/UOtCGNOqAu3Qo9WzNfhIG2/Eng.-Shadow-ITI

🎯 Objective

Students must build an e-commerce mobile app using **Flutter**, **Firebase**, and **Cubit for state management**, based on the shared Figma design.

☑️ Required Features

1. 🔐 Authentication

- Register & login with **email and password** using Firebase Authentication.
- Validate form inputs.
- Handle and display errors (e.g. weak password, user not found, etc.).

2. 🛍️ Display Products

- Products must be fetched from **Cloud Firestore**.
- Each product should contain:
  - Name
  - Price
  - Image
  - Description
- Products should be shown in a grid or list view (as per design).

3. 🛒 Cart Functionality

- Add products to cart.
- Show cart page with all added items.
- Display total price.
- Ability to remove items from cart.
- Save the cart to Firestore, linked to each user.

4. 📄 Product Details Page

- When a user taps on a product, show full product details.
- Include "Add to Cart" functionality from this page.

5. 👤 User Profile

- Display the logged-in user’s information (email at minimum).
- Include a "Logout" button.

🧩 Project Structure Suggestion

```
lib/
├── cubits/
│   ├── auth/
│   ├── products/
│   ├── cart/
├── models/
├── screens/
├── widgets/
├── firebase_options.dart
└── main.dart
```

🎨 UI Guidelines

- Match the Figma design layout and colors.
- Use Google Fonts (like `Cairo`, `Inter`) for consistent typography.
- Use `shimmer` for loading indicators (optional).
- Use `CachedNetworkImage` for product images.

🔥 Firebase Features to Use

- **Firebase Authentication** – for sign in/up
- **Cloud Firestore** – for storing products, user cart
- *(Optional later)*: Firebase Storage – for uploading product images

📅 Submission Deadline

📌 **Tuesday, July 29, 2025**

🧠 Evaluation Criteria

- Code structure and folder organization
- UI/UX consistency with Figma
- Correct use of Cubit state management
- Proper Firebase integration (Auth + Firestore)
- Clean code and logic

🟦 **Bonus Opportunity!**
If you implement **any screen** or feature **that is *not present* in the Figma design**, and it is useful and well-integrated into the app (e.g., wishlist, search, or settings page), you will receive **bonus points** added to your project grade.
